

# OUR PROCESS

We have a 5 step product development process at Eastcut. A significant advantage to our process is developing our product indoors, all year round, assembling each fully built wall or floor on-site without worrying about the day-to-day weather conditions.

# WE BUILD FOR THE FUTURE!

**EASTCUT**  
WOOD BUILDING SOLUTIONS

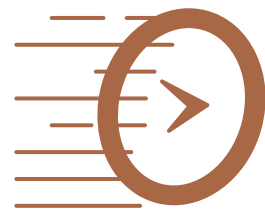

# ABOUT US

Eastcut is a new Industrialized Wood Prefabrication company in Trenton, Nova Scotia. We leverage our unique fabrication technology to construct multi-unit buildings and other commercial and residential type buildings efficiently. Our product range consists of floor cassettes and wall and roof panels.

Environmentally Friendly

Fast and easy assemble on-site

High quality product

# BENEFITS OF PREFAB

Panelized construction is the evolution of construction. It takes the technology from traditional framing into a controlled and efficient manufacturing environment.

Are you ready for a better way to build?

## → LOWER COST

Framing/erection duration is cut by as much as 75%, reducing the construction timelines and interest costs significantly.

## → ENERGY EFFICIENT

Less waste is generated with offsite framing compared with on-site framing. Because of the precise construction, it will result in a more energy-efficient building every time.

## → ACCURACY

Manufactured with world-class automation technology delivering better performance than conventional building methods and reducing the time taken to reach the lock-up stage from months down to only weeks.

## → QUALITY CONTROL AND SAFETY

The machinery, tools, and technology used in the factory are state-of-the-art. The product is produced in a climate-controlled setting by professionals.

## → FEWER WORKERS

Panelized construction requires fewer workers than traditional construction jobs, significantly lessening the impact of skilled labor shortages in construction.
